# ME Engineers

Some of our top projects

This will  
change  
everything!

# Today's Agenda

---

Revit API  
Why Python  
Open Source Tools  
Revit Elements  
Revit Filtered Element Collector  
Revit Transaction  
Using your tools with pyRevit

# Revit API

My day is spent solving problems.

The Revit API gives me a huge toolbox to be able to create a better solution.

It is having the ability to look inside of Revit allowing the user the ability to create tools instead of being stuck using tools already created

# Why Python?

---

Easy to read and write.

Free to use.

Interpreted not compiled.

# Open Source (free) Tools

Revit Lookup Created by Jeremy Tammik

Revit Python Shell Created by Daren  
Thomas

pyRevit Created by Ehsan Irennejad

# Revit Elements

---

Elements are the main part of Revit.  
Each element has properties and  
methods.

# Revit Filtered Element Collector

---

Allow us to collect elements in the Revit  
Database.  
First step for a script.

# Revit Transaction

Any changes to elements in the Revit Database must be done within a transaction.

# Use your tools with pyRevit

---

Choose where to save them.  
Add location to pyRevit.  
Reload pyRevit.  
Update script and try as needed.

# Let's try it.

Time for the product demo

# Today's we accomplished
