Dynamo Packages: Have You Tried These Yet?

Carl Storms

IMAGINiT Technologies

John Pierson

Parallax Team

Learning Objectives

- Learn about some great Dynamo packages
- Find out what some of the cool features of those packages are
- How do I deploy dynamo packages?
- Have Fun!

Description

In this session, we will explore some of the many great Dynamo packages that are available to improve your Dynamo experience.

This session is designed to be a little more fun as we explore some of the packages that are available in the Dynamo Package Manager. We will look at packages from some of the greats like Andreas Dieckmann, Konrad Sobon, Nate Miller, and John Pierson to name a few. As well as packages that can work with Navisworks, Excel, and landscape design and more. We will also touch on how to deploy dynamo packages company wide.

While the general flow of this class will be fun, there will be lots of helpful packages and that can increase your productivity looked at as well.

Speaker

Carl Storms – Solutions Consultant
IMAGINiT Technologies – Building Solutions Division

Drawing on his 20 years of experience in architecture, engineering, and construction, **Carl Storms** provides a practical and well-rounded understanding of building information modeling (BIM) to clients. He's worked in residential and commercial architecture, as well as construction and has nearly 10 years of teaching experience at the collegiate and industry level. This experience aids him in providing the business case for BIM and how it makes the most of collaboration, coordination and design tools and processes.

Through implementations, instruction, mentoring, seminar presentations, whitepapers and more, Carl assists clients with the adoption of design technology and BIM processes. As someone who truly enjoys the process of building information modeling, Carl spreads his love of all things BIM via Twitter [@theBIMsider](https://twitter.com/theBIMsider), on his Blog www.thebimsider.com, or as a co-host on two AEC Industry Podcasts: The [Simply Complex Podcast - Conference Edition](#), as well as [BluePrints](#) a podcast sharing ideas and knowledge about the AEC industry.

Speaker

John Pierson – Design Technology Specialist **Parallax Team**

John Pierson is a Design Technology Specialist at Parallax Team, a full-service Implementation firm. Specializing in the creation of custom tools and workflows for the AEC industry, John has become well known for his Dynamo-based solutions. Currently, John manages several Dynamo packages that are available to the Dynamo community. This includes Rhythm, Bang! and Duct Tape totaling over 45,000 downloads.

In addition to the creation of automated workflows and custom tools, John is a Revit certified professional for all disciplines. As a Revit certified professional, he provides custom content creation, project-based modelling, and Revit training.

John is an avid contributor to the Dynamo community, being a moderator on the Dynamo forum and a contributor to the Revit Forum. John is also a frequent speaker at many events including, Autodesk University, BiLT Conferences and various user groups everywhere.

Find him at sixtysecondrevit.com, [@60secondrevit](https://twitter.com/60secondrevit) or on parallaxteam.com

Packages

archi-lab.net

Author: [Konrad Soban](#)

Website: [archi+lab](#) & [Bad Monkeys](#)

Package Repository: <https://github.com/ksobon/archilab>

DynamoNodes: <https://dynamonodes.com/2016/01/27/archi-lab-node-index/>

Latest Version: 2019.2.6 (Dynamo 2.x) 2018.13.13 (Dynamo 1.3.x)

Latest Update: Oct. 11th, 2018

Dependencies: N/A

Compatible With: Revit 2019.1 & Dynamo 2.0.1 / Revit 2018 & Dynamo 1.3.x

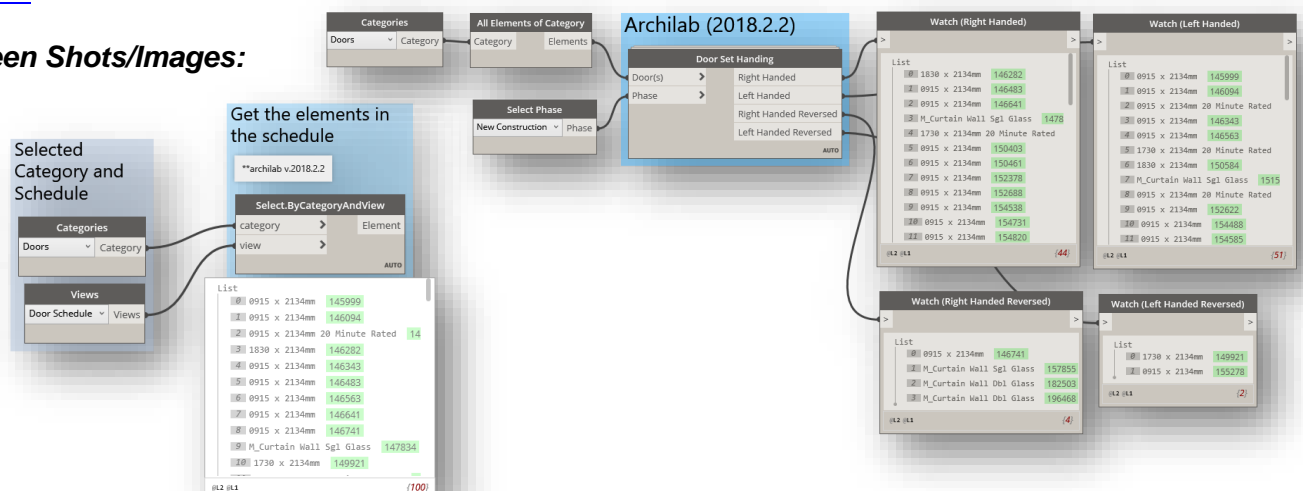

Download: <http://dynamopackages.com/> and search for “**Archi-lab.net**” or download directly from the Package Manger in Dynamo.

Other Packages of Note by Author: Archi-lab_Mandrill, Archi-lab_MantisShrimp, and BumbleBee

Description: Archi-lab is a collection of practical nodes for everyday use. It contains mostly Revit API related functionality, but also some List management, CSV parsing and even Analysis nodes. Revit 2019.1 Dynamo 2.0.1 - Set of practical nodes by Konrad K Sobon | www.archi-lab.net | @arch_laboratory

[Source](#)

Screen Shots/Images:

Archi-lab_Mandrill

Author: [Konrad Soban](#)

Website: [archi+lab](#) & [Bad Monkeys](#)

Package Repository: <https://github.com/ksobon/Mandrill>

DynamoNodes: N/A

Latest Version: 2018.2.2 (Dynamo 2.x) 2018.0.2 (Dynamo 1.3.x)

Latest Update: Oct. 11th, 2018

Dependencies: N/A

Compatible With: Revit 2018 & Dynamo 2.x / Revit 2018 & Dynamo 1.3.x

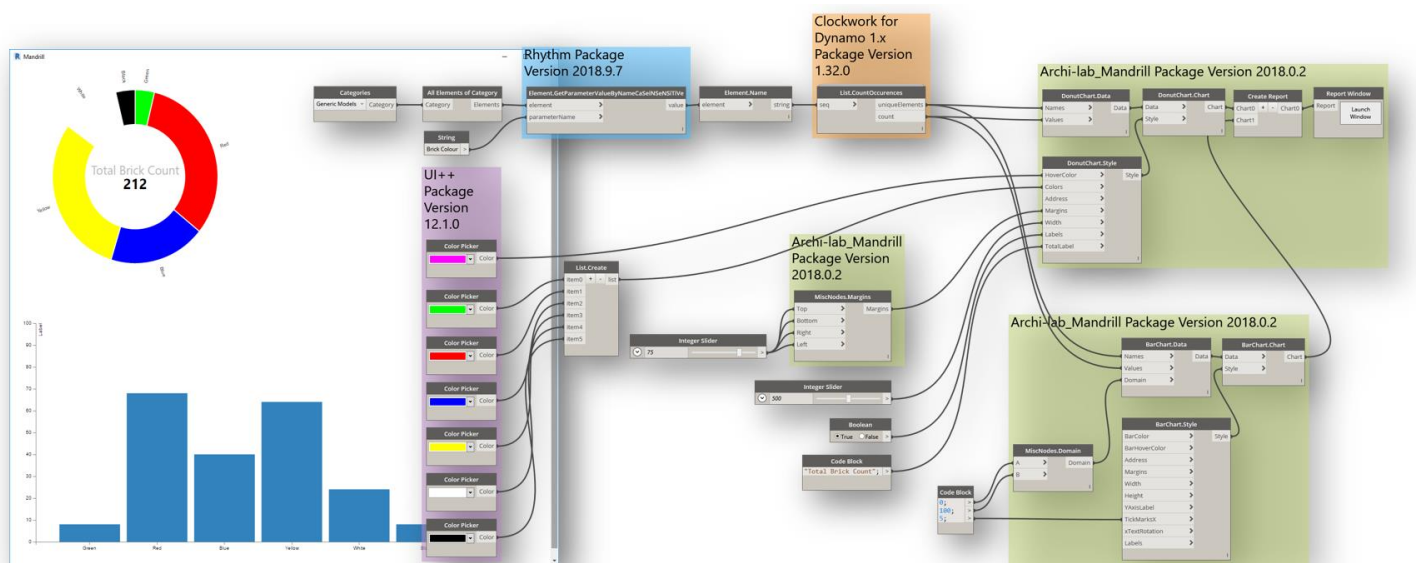

Download: <http://dynamopackages.com/> and search for “**Archi-lab_Mandrill**” or download directly from the Package Manger in Dynamo.

Other Packages of Note by Author: Archi-lab.net, Archi-lab_MantisShrimp, and BumbleBee

Description: Dynamo 2.0. Data visualization package for Dynamo. It uses the d3.js library to generate all charts and then serve then via a web browser. GitHub page here: <https://github.com/ksobon/Mandrill> more info and contact info: <http://archi-lab.net/>

[Source](#)

Screen Shots/Images

Bang!

Author: [John Pierson](#)

Website: [sixtysecondrevit](#)

Package Repository: https://bitbucket.org/j0hnp/bang_for_dynamo/

DynamoNodes: <https://dynamonodes.com/category/bvn/>

Latest Version: 2018.9.9

Latest Update: Sept. 10th, 2018

Dependencies: N/A

Compatible With: Revit 2018+ & Dynamo 1.3.3 and 2.0.x

Download: <http://dynamopackages.com/> and search for "**Bang!**" or download directly from the Package Manger in Dynamo.

Other Packages of Note by Author: Rhythm, Monocle, Duct Tape, TetrisThemeSong, WhatTheNode

Description: Bang! is built for Dynamo 1.3.3 and 2.0.x and Revit 2018+. This package provides access to Revit warnings utilizing methods added in the Revit 2018 API. That being said, these nodes will only work in Revit 2018 and higher. Why Bang? Bang stands for the "!" symbol and appears on warning signs. :) Bang! is authored by John Pierson ([@60secondrevit](#)) of Parallax Team (<http://www.parallaxteam.com/>) and www.sixtysecondrevit.com.

Author: [Dimitar Venkov](#)

Website: [Bad Monkeys](#)

Package Repository: N/A

DynamoNodes: N/A

Latest Version: 132.1.1

Latest Update: Apr. 25th, 2018

Dependencies: N/A

Compatible With: Dynamo 1.3.x

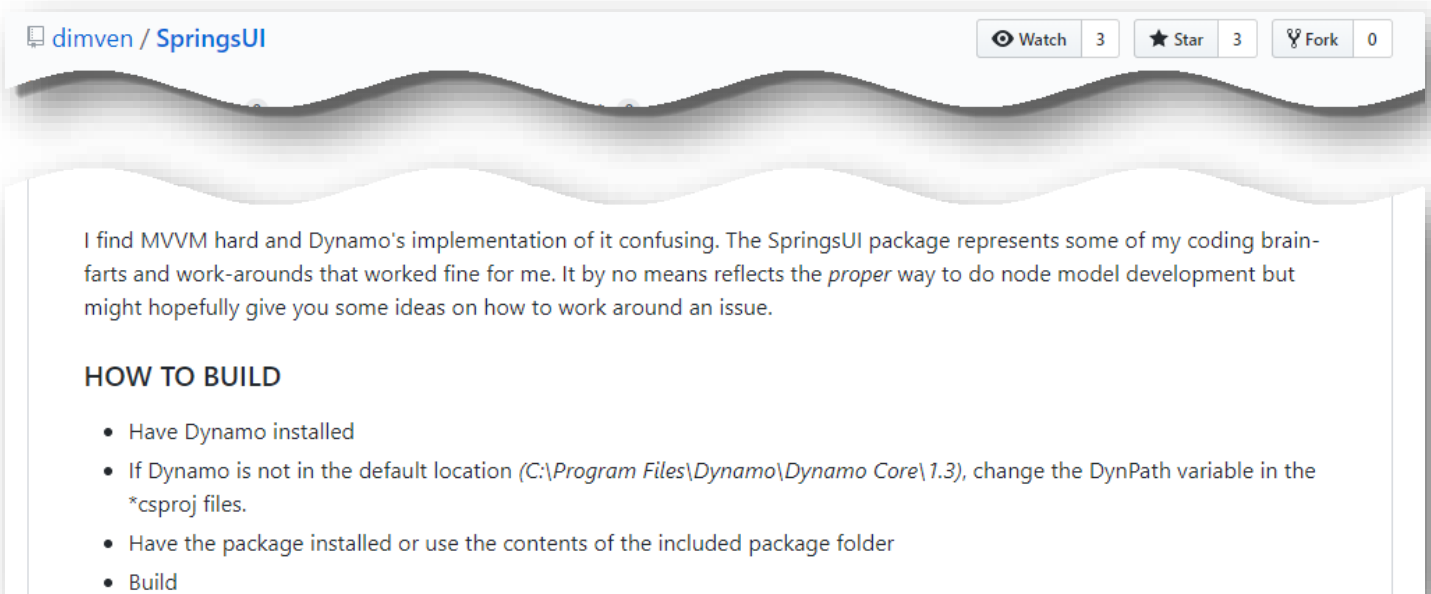

Download: <http://dynamopackages.com/> and search for “**SpringsUI**” or download directly from the Package Manger in Dynamo.

Other Packages of Note by Author: Dynamic CSharp Interpreter, Spring nodes

Description: A small selection of nodes that taps some of Dynamo's backend functionality.

[Source](#)

Screen Shots/Images:

dimven / SpringsUI

Watch 3 Star 3 Fork 0

I find MVVM hard and Dynamo's implementation of it confusing. The SpringsUI package represents some of my coding brain-farts and work-arounds that worked fine for me. It by no means reflects the *proper* way to do node model development but might hopefully give you some ideas on how to work around an issue.

HOW TO BUILD

- Have Dynamo installed
- If Dynamo is not in the default location (C:\Program Files\Dynamo\Dynamo Core\1.3), change the DynPath variable in the *.csproj files.
- Have the package installed or use the contents of the included package folder
- Build

WombatDynamo

How to get Dynamo Packages

If you are not able to perform the task you wish with out of the box Dynamo nodes you can search for **Packages** (custom nodes or groups of custom nodes created and shared by others) to help with the task.

You can search for Packages under the “Packages” tab

- If you click on a package it will show a drop down with more info.

- You can use the “Manage Packages” to manage your packages.

You can search for Packages on the Package Manager website: <http://dynamopackages.com/>

Dynamo Package Manager

Share and discover workflows for Dynamo visual programming

Dynamo Package Folder

Once the package is downloaded you need to add it to you Dynamo Package Folder.

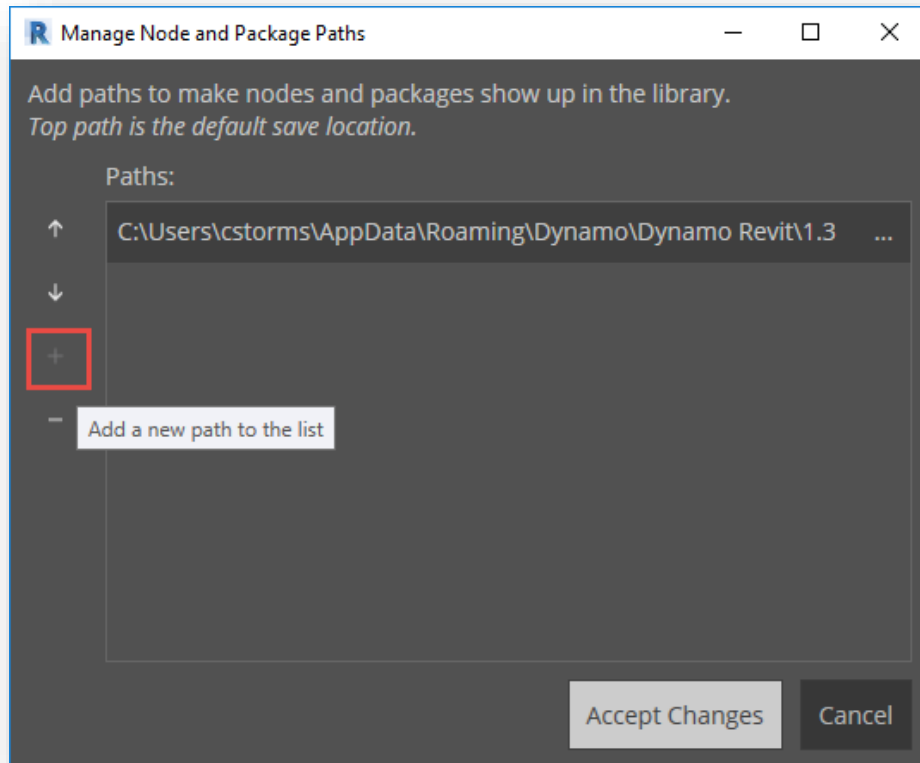

- This can be on a network server, so all users can have access to the same folder.
- Or it can be the default location on your c: drive:
 - Users > “User Name” > AppData > Roaming > Dynamo > Dynamo Revit > “Dynamo Version” > packages

- You can change the location Dynamo looks for packages, or add another location under the “Settings” tab.

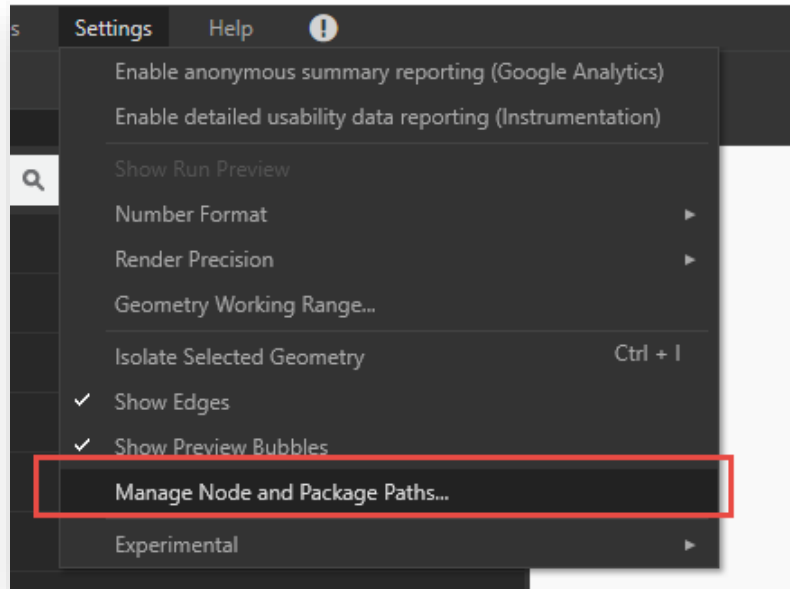

- In the new dialog box, you can now change the default location, or add more locations by hit the “+”.

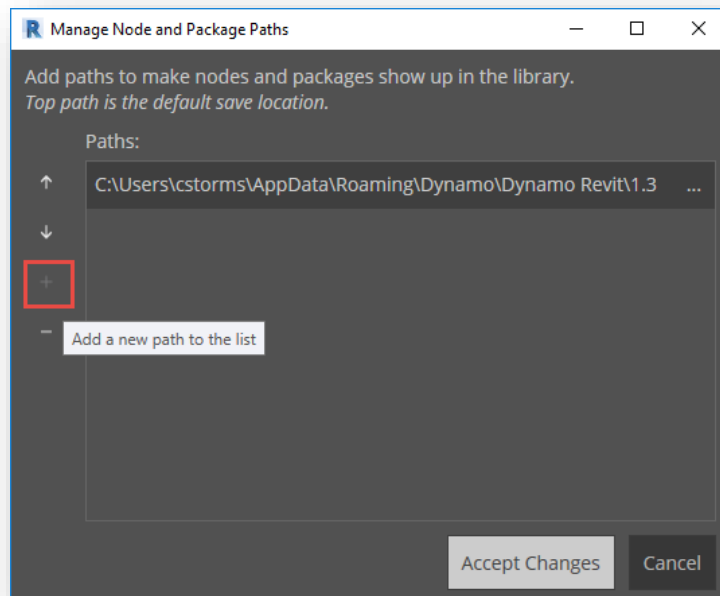

Dynamo Package Deployment

One way you can make sure all your users are seeing and using the same Dynamo packages is to have one central “packages” folder located on your company’s network. Then you will need to go to each user’s local machine and map Dynamo to look for packages in that location.

- You can change the location Dynamo looks for packages under the “Settings” tab.

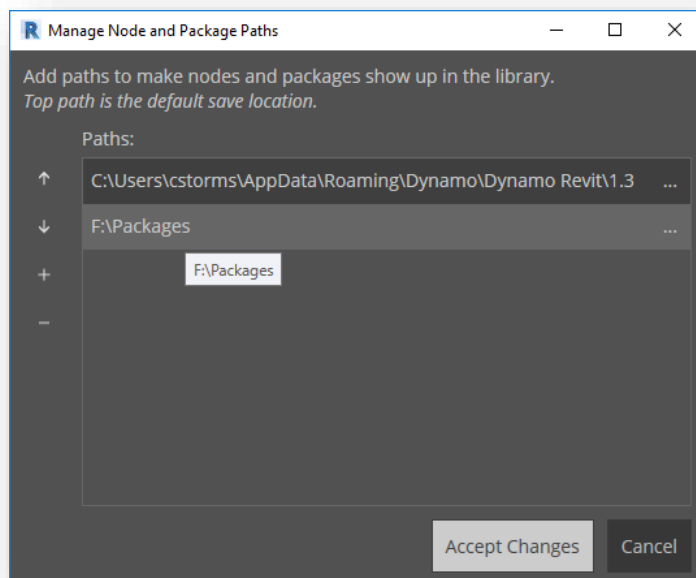

- In the dialog box that pops up you can now change the default location by hit the “+”.

- Navigate to the location you want to keep the Dynamo packages folder on your network.

- Then hit “Select Folder” and you are finished.

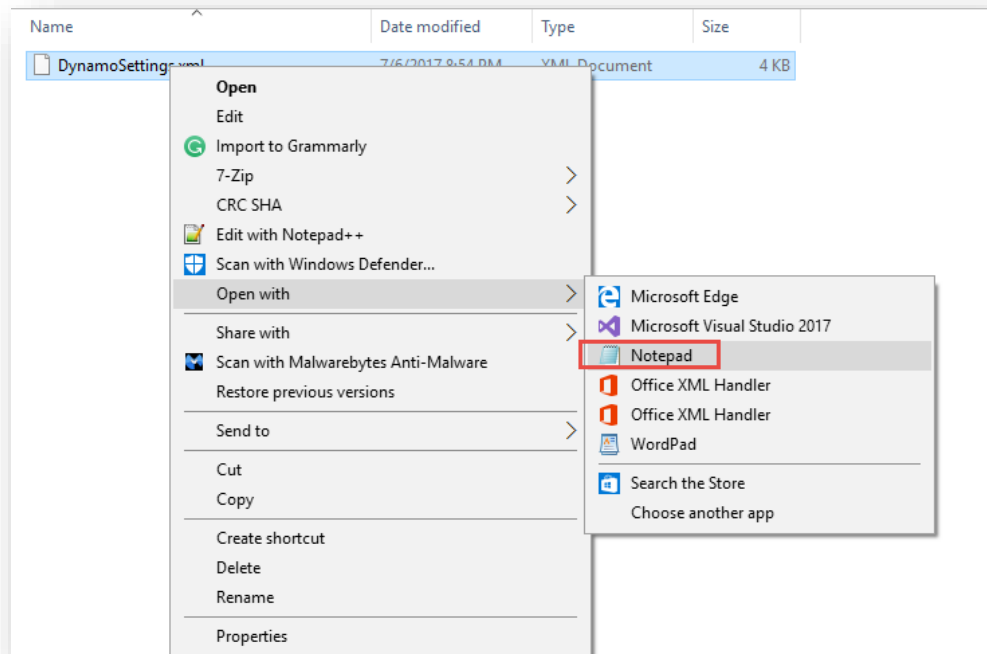

- Now repeat the process for each user's computer.

If you have a large user base for Dynamo in your company, you might be wondering if there is another way to do the deployment, well there is. Using this method, you will be able to setup your entire company's deployment at once.

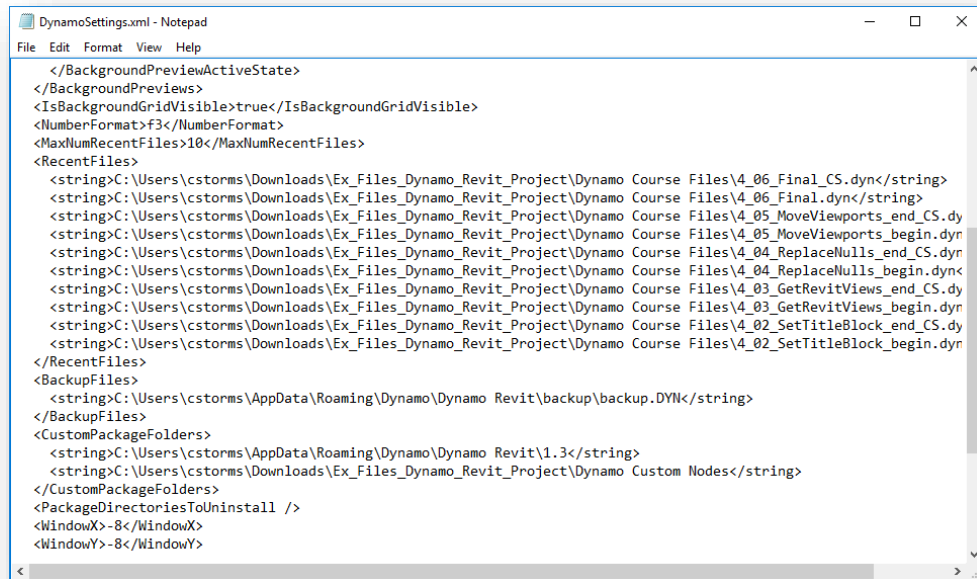

- You can begin by tracking down the “Users App data folder” on the computer you will use to set up the deployment image.
 - Users > “User Name” > AppData > Roaming > Dynamo > Dynamo Revit > “Dynamo Version”
 - Then make a copy of the “DynamoSettings.xml” file and save to a different location while you setup the deployment image version

- Now you can open the copy of the .xml file by clicking on it and picking “Open with Notepad”.

- Once you open the .xml file you will see lots of things, or settings, not just the Custom Package Folders.

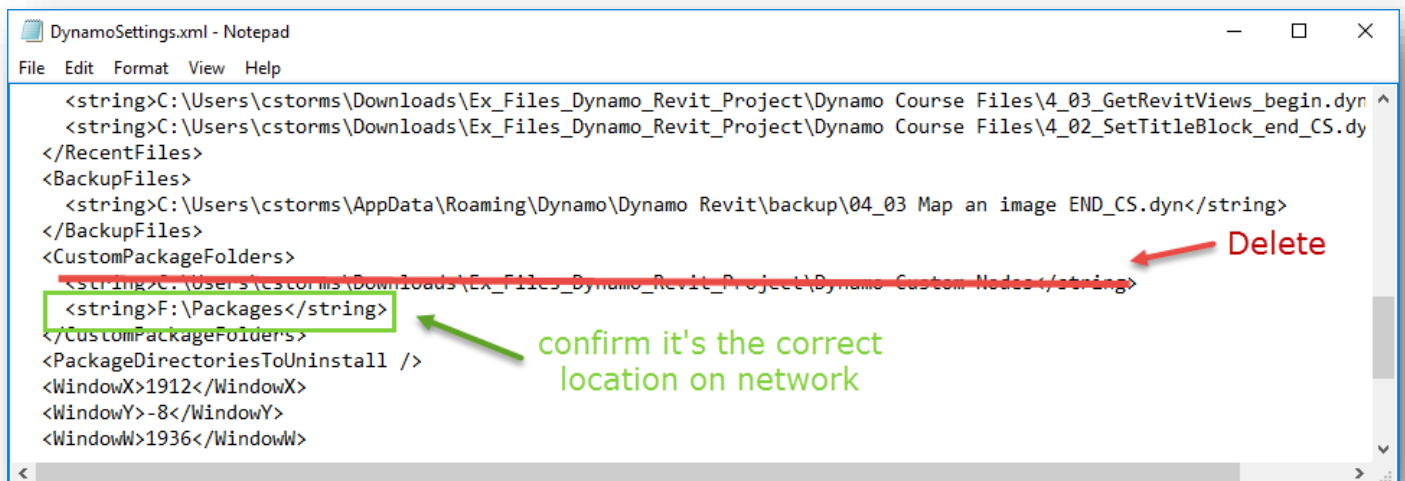

```

DynamoSettings.xml - Notepad

<WindowY>-8</WindowY>

```

- Now make sure the folder location is the correct one for the network location.
 - Then you will want to delete the default location that is based on the computer you will use to set up the deployment image. When Dynamo is opened on each user's computer for the first time if this "default" location is missing, Dynamo will just create a new one for each user based on their computer

```

DynamoSettings.xml - Notepad
File Edit Format View Help

  <string>C:\Users\cstorm\Downloads\Ex_Files_Dynamo_Revit_Project\Dynamo Course Files\4_03_GetRevitViews_begin.dyn

<WindowW>1936</WindowW>

```

Annotations:

- A red arrow points to the line `<string>C:\Users\cstorm\Downloads\Ex_Files_Dynamo_Revit_Project\Dynamo Custom Nodes</string>` with the text "Delete".
- A green arrow points to the line `<string>F:\Packages</string>` with the text "confirm it's the correct location on network".

- At this point it's also a best practice to delete all the "Recent Files" so they don't become part of the deployment image.

```

DynamoSettings.xml - Notepad

  <string>C:\Users\cstorm\Downloads\Ex_Files_Dynamo_Revit_Project\Dynamo Course Files\4_02_SetTitleBlock_end_CS.dyn</string>
</RecentFiles>
<BackupFiles>

```

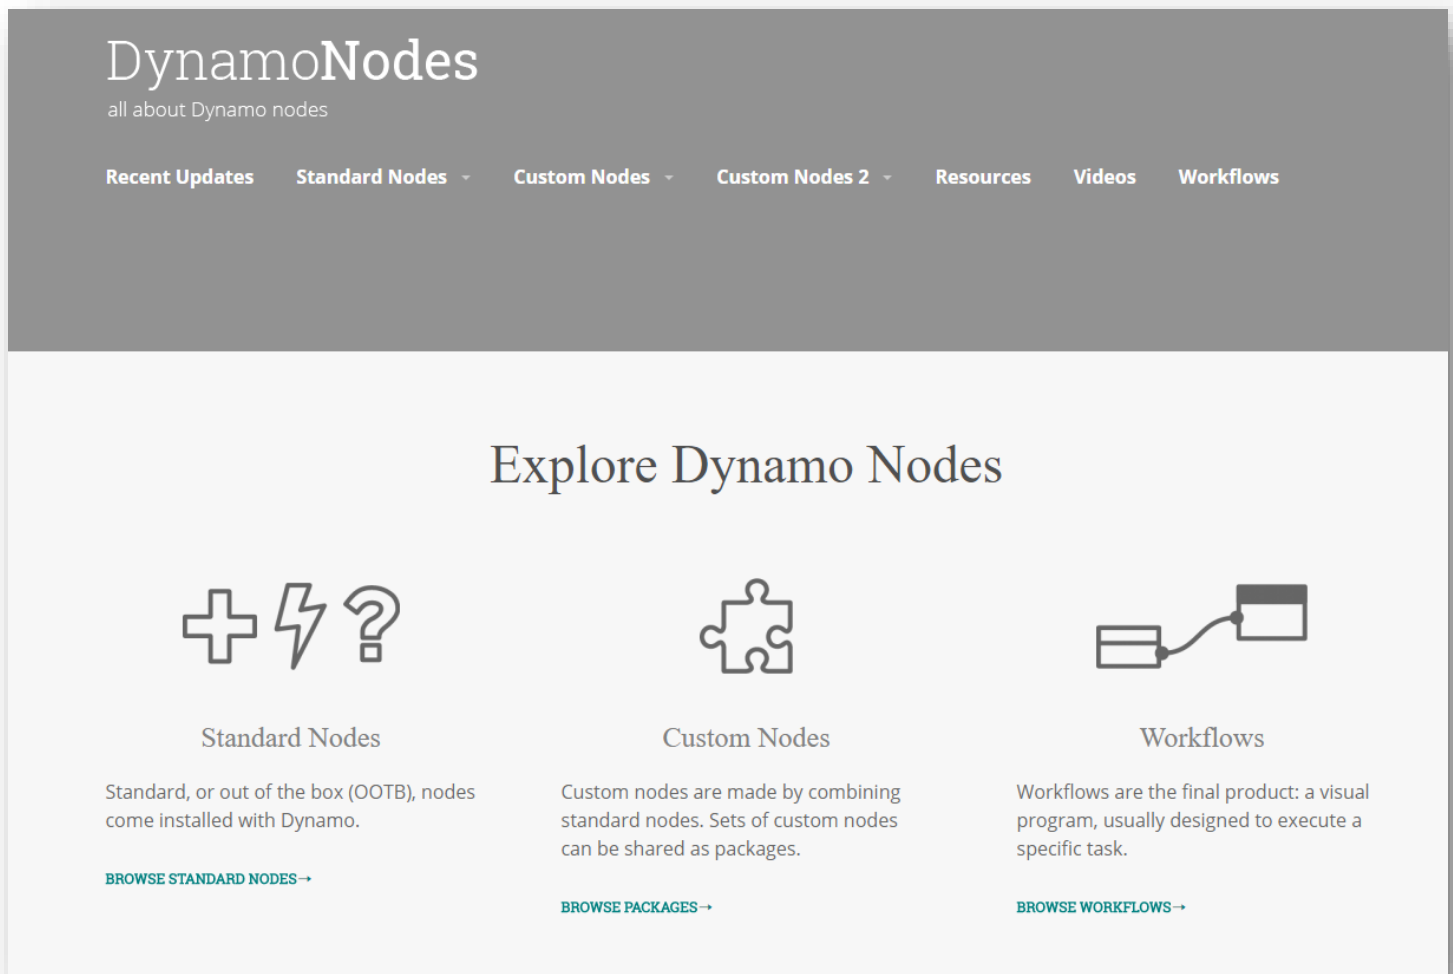

- Lastly you save the DynamoSettings.xml file and copy the new "deployment image" version to all the user's computers, using the same path that we got the file from originally.
 - Users > "User Name" > AppData > Roaming > Dynamo > Dynamo Revit > "Dynamo Version"
 - This can be done indivial, or with any automation process that you or your IT department may use for other deployments.

DynamoNodes

[DynamoNodes](#) is a very helpful website that was created by [Luke Johnson](#), of [What Revit Wants](#) fame. Luke has also opened the website so those that want to add their custom nodes, and information about them can also contribute to this grown repository of Dynamo Package Knowledge.

I reference this website many time in the handout, and want to make sure everyone knows how helpful this site can be when you are:

- Looking for custom nodes and packages for Dynamo
- Looking for an explanation of what Standard nodes do
- Looking for what some custom nodes do
- Dynamo Workflows using custom nodes, most time written by the node creator.
- You can find all of this at:
 - <https://dynamonodes.com/>

The screenshot shows the homepage of the DynamoNodes website. The header features the site name 'DynamoNodes' with the tagline 'all about Dynamo nodes'. A navigation bar includes links for 'Recent Updates', 'Standard Nodes', 'Custom Nodes', 'Custom Nodes 2', 'Resources', 'Videos', and 'Workflows'. The main content area is titled 'Explore Dynamo Nodes' and is divided into three columns. The first column, 'Standard Nodes', is represented by a plus, lightning bolt, and question mark icon, and describes standard or out-of-the-box (OOTB) nodes. The second column, 'Custom Nodes', is represented by a puzzle piece icon and describes nodes made by combining standard nodes into shareable packages. The third column, 'Workflows', is represented by a node and connector icon and describes the final product as a visual program for specific tasks. Each column has a corresponding 'BROWSE' link at the bottom.

DynamoNodes

all about Dynamo nodes

[Recent Updates](#) [Standard Nodes](#) [Custom Nodes](#) [Custom Nodes 2](#) [Resources](#) [Videos](#) [Workflows](#)

Explore Dynamo Nodes

Standard Nodes

Standard, or out of the box (OOTB), nodes come installed with Dynamo.

[BROWSE STANDARD NODES →](#)

Custom Nodes

Custom nodes are made by combining standard nodes. Sets of custom nodes can be shared as packages.

[BROWSE PACKAGES →](#)

Workflows

Workflows are the final product: a visual program, usually designed to execute a specific task.
